

ANOTHER IMPORTANT FREEZE PRECAUTION REGARDING YOUR PLUMBING

If you have an emergency and need to turn off the water supply to your home or building, be sure to turn off the electric breaker to your hot water heater. This precaution applies only to hot water heaters that operate on electricity and is to prevent damage to your hot water unit.

Be sure to protect your plumbing from freezing weather. When temperatures are expected to dip to freezing or below, remember to leave a thin stream of water running from cold water faucets that are against an outside wall of your home or building.
